Taurex Range: A variant of Gesipa's Taurus Range with VAS mechanism

[KEIGHLEY], [WEST YORKSHIRE], [03/03/11]- A variant of the Taurus range, Gesipa's Taurex 1 to 6 was introduced to give further options in the production environment. Ideally suited for setting of Blind rivets and lock bolts in poorly accessible locations, the aforementioned tools come with VAS (vacuum absorption system) fitted as standard. This device absorbs the spent mandrel after the riveting operation and automatically ejects the spent mandrel into the collector. A further advantage is that the rivet is held in the jaws even when the tool is held in a vertical position.

The Gesipa Taurus 1-4 have been dominant in the market for many years now and in the last 18 months the range has been increased with the introduction of even more powerful Taurus 5 and 6. With remote mounted pressure transducer, Taurex is perfectly designed for fixed installation in production lines or semi-automatic workstations. Taurex range can be combined with almost all the supplements and options of the Taurus series like head extensions, mandrel containers, rivet counting units, process control, pressure trigger and remote control.

Gesipa Blind Riveting Systems Ltd manufacture and deliver an extensive range of rivet, rivet nuts, rivet nut studs, associated tooling and bespoke based solutions. With ISO 9001, ISO14001 and ISO/TS 16949:2009 accreditations Gesipa offers a complete range of engineering solution for specific fastening requirements to the automotive, construction, railway, white goods, electronics and many other varied industries.
