

## Continued Investments helps expand capabilities

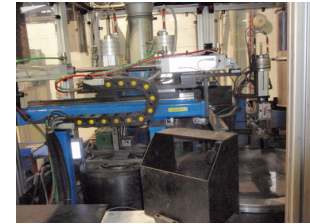

After spending nearly 2 years exploring the market for rivet nut studs and getting good feedback primarily from automotive sector, we decided to invest in three all-new rivet nut stud machines.

The three rivet nut stud machines will help enhance our production capabilities and flexibility. It allows to fit a wide range of rivet nut stud sizes from M4 to M12 and to develop special threads and nuts to suit specific customer requirements.

We take pride in our quality and strive to improve our performance each day with more versatile, controlled and accurate production capabilities.

To maintain our Quality standards, we are constantly looking to enhance our machine portfolio and only use reliable and industry trusted suppliers. We also believe in developing new product designs and different concepts.

A milestone was set with the development of a 'Profile rivet' designed and developed for one of our automotive customer applications, saving them thousands of Pounds. We now manufacture a wide range of Profile rivets available in various sizes and head styles in our UK facility.

Some of the latest additions to our wide array of machines in the facility are

- ⇒ A Cold-forming machine
- ⇒ Assembly and finishing machines
- ⇒ Heading Machines
- ⇒ Steel-degreasing machine
- ⇒ New eyelet machine to support diversity on rivet manufacturing
- ⇒ Complete aluminium processing unit in house
- ⇒ A new Inspection machine to enhance our testing capabilities,
- ⇒ Machine computers to verify the product against the design while still in production
